QUANTITY DISCOUNTS

ON ORDERS PLACED DIRECT

All quantity discounts forfeited if account is unpaid after 90 days.

10% discount from list price on order of 10,000 to 25,000 cuttings.

15% discount from list prices on order of 25,000 to 40,000 cuttings.

20% discount from list prices on order of 40,000 and over.

QUANTITY DISCOUNT

10% discount allowed from list price on orders for 10,000 or more.

CASH AND CARRY ORDERS

5% discount from listed prices on CASH AND CARRY ORDERS, when calling on Thursday or Friday. Same discount given on call orders to be picked up on Monday, Tuesday, or Wednesday, provided order is placed not later than Friday of preceeding week.

GROWING 'MUMS FROM START TO FINISH

First step if you are not experienced in growing 'MUMS is to acquaint yourself with their habits and needs, then be prepared to take care of them as they progress in growth. We give below basic details which we find are most widely used among reputable growers in this section of the country. The grower will soon learn by his own experience how to modify or elaborate on these instructions.

The successful grower will figure out his planting schedule, many months or a year in advance. This not only helps you but the supplier of young stock to have sufficient stock for the particular planting date. Have the space ready for them and plant the cuttings on arrival or as soon as possible. The cuttings you receive will be grown under modern conditions, from the cleanest stock available, and as free from disease and premature buds as modern methods can produce.

SOIL — Preparation and Fertilizing

'Mums grow well in most soils. Moderately porous soil is best. This can be made by the addition of peat or manure but knowing the behavior and nutrient content of your own particular soil is important. Soil tests will give you this information and if you cannot do this yourself, your Agricultural College or Experiment Station will be glad to do it for you.

Before sterilizing or planting, add lime and superphosphate as needed. (In case of steam sterilizing these materials should be added before sterilizing.) Use about 3-5 lbs. to 100 sq. ft. of bench space. Nitrogen and Potash can be added after the plants have become established and start to grow. These elements can be applied in dry or liquid form according to the growers preference. A complete dry fertilizer such as 5-8-7 or 5-10-5 or any of the water soluble fertilizers can be used.

When using old soils, or soil used for a previous crop, it should first be sterilized. Then watch for high soluble salts which may be present after sterilization. These salts cause plenty of trouble to 'Mums. They are the residue of fertilizers used on the previous crop, and will kill the roots of young cuttings or seedlings, or result in a poor sickly crop. These salts can be washed out of the soil by heavy leaching with water, giving two applications in succession.

SOIL STERILIZATION

Sterilizing the planting soil is vitally important in destroying such diseases as Verticillium wilt, nematodes, and other destructive organisms carried in the soil, to insure a quality crop and is a must if successive crops of 'Mums are grown in the same soil. The cuttings supplied, while free of diseases when received will pick up various diseases from the soil they are planted in, unless it has been properly and thoroughly sterilized. Before sterilizing be sure to loosen all soil thoroughly as steam or chemicals cannot penetrate hard packed soil satisfactorily.

In addition to producing a better crop it also proves to be economical in allowing reuse of valuable soils and humus, and saving on costly labor involved in changing soils and weeding.

Sterilizing can be done with either Steam or Chemicals. With steam sterilizing, which is most practical, it is necessary first that the soil be moist before sterilizing and that a temperature of 180 degrees fahrenheit be maintained throughout the entire soil mass for a period of not less than one half hour.

Chemical sterilizing can be used where steam is not available and circumstances will permit it. The soil should be at least 60 degrees fahrenheit and the greenhouse being treated should have no other living plants in it, as chemical reactions will destroy them. There are a number of chemicals suitable for this work, but whatever is used, follow the manufacturer's instructions carefully.

PLANTING AND SPACING

The time of planting will be determined by the blooming date, or response group, quality and size of flowers, and pinching if desired. For normal flowering allow about three weeks from planting to pinching. Normal pinch date is given with each variety listed in the general catalogue of varieties. For the off season program refer to schedule outlined in this catalogue for planting and pinching data.

Plant cuttings shallow, not over one inch deep and directly to permanent benches if possible, soon as the cuttings are received. Keep roots of the cuttings protected at all times while planting. Exposure, especially to hot sun and wind, will destroy the root action in a few seconds.

If space is not ready when cuttings arrive they should be potted or banded to keep them soft and growing. Here again, careful attention should be given to see they are put in fresh or sterilized soil, so as to keep them free of verticillium wilt and other soilborne diseases. Be sure not to let them stay too long in this crowded condition. Shading newly planted stock on very hot sunny days for the first couple of days will help considerably, as well as, frequent spraying with water over the tops of the cuttings. They should not be allowed to wilt.

Spacing will depend on the quality desired as well as the time of year and number of pinches. Standards are generally spaced 7 x 8 or 8 x 8, grown two stems to the plant. Some growers allow three flowers to come on the outside rows where light is more abundant. For single stem culture 6 x 6 or 6 x 7 is ample. Pompon spacing depends on method of pinching and varieties. Some varieties have much heavier foliage than others and require more space. For the one pinch method 7 x 8 or 8 x 8 is fairly standard. For 2 pinch method 8 x 9 or 9 x 9 will be sufficient. For single stem production 4 x 6 or 4 x 7 is about right. The general rule followed is to give each flowering shoot approximately 20 sq. in. of space.

WATERING

Chrysanthemums require lots of water, especially when grown on raised benches and if you have a good porous, well drained soil. Water heavily after planting and then spray or sprinkle plants for a few days until they have taken hold. Do not let them wilt if possible. Once the foliage

gets heavy do not water overhead and by no means allow the foliage to be wet overnight. Keep the foliage dry and the soil moist.

PINCHING

Pinching means the stopping of the upright growth of the plants by cutting or breaking off the growing tip of the plant stem. It is done to increase the number of stems per plant, to control type of bud formation and to keep plants shorter in growth. This will cause a number of breaks or shoots to appear. The plants should be pinched soon after the cutting takes hold and starts to grow freely. Usually only the tip of the stem is removed when under fast modern production. Do not pinch down into the hard stem. Thinning the breaks down to about 3 shoots to the plant on pompon varieties and 2 shoots on the Standards usually give best results. Normal pinch dates are given in the general listing of varieties. For the off season cut flower or pot plant program refer to pinch dates in the desired schedule.

LIGHT AND TEMPERATURE

Except for the first few days when the young cuttings are planted or potted, Chrysanthemums require all the light they can get. If shade is on the roof from summer it is best to remove it at least by the 1st of September. Chrysanthemums are no longer considered a cool crop. A minimum of 50 degrees or better still 55 to 60 degrees night temperature is considered best for all stages of growth for normal flowering. This is particularly important during bud initiation as too low a temperature will prevent buds from forming properly and likely result in some blind growth. Temperatures too high, 90 degrees or over, which can occur under black cloth, is also bad as it tends not only to slow down the crop but fades the pink, red and bronze shades.

INSECTS — PREVENTION AND CONTROL

It is very important to keep the stock clean and free of injurious insects. The best way to insure this is to start spraying the plants about two weeks after planting and to spray at intervals of every two or three weeks until color shows. You will find it easier to keep them clean than to wait until infestation shows up and causes damage, then have the task of trying to get the best of it.

A good general purpose spray for Chrysanthemums:

Material	Amount to make		
	100 Gal.	25 Gal.	3 Gal.
Water	100 Gal.	25 Gal.	3 Gal.
DDT 50% wettable powder	1 lb.	1/4 lb.	1 1/2 tbsp.
Malathion 25% wettable powder	2 1/2 lbs.	10 oz.	4 tbsp.
Parzate, or Fermate	1 1/2 lbs.	5 oz.	2 tbsp.
DuPont Spreader sticker - or other spreading agent such as Drefit, may also be used	6 oz.	2 tbsp.	1 tsp.

Mixing Procedure — Put all dry ingredients into a can or pail. Add small amount of water, stir to make a thin paste. Put a small portion of the water to be used into the spray tank. Add above mixture slowly, stirring constantly, (run agitator while adding the mixed solution). Add balance of water and be sure it is well mixed before using.

DISBUDDING

It is extremely important that you take the time to select the flowering buds on Standards as soon as they appear and are sizeable enough to remove. If the crop was planted and pinched on or near the recommended dates, flower the first bud that appears. In other words, as soon as a bud of any kind appears, remove all side shoots and let the center bud flower.

SUPPORTING THE PLANTS

To grow good flowers with good stems it is essential to keep the plants properly supported at all times.

The wires and cross string method is least work, most economical and practical. Start supporting the plants soon as they are established and either add additional layers of wires and cross strings or move the first layer up about every 10 to 15 days depending on growth.

TO PREVENT PREMATURE BUDS

'MUM CUTTINGS received before May 1st, if grown at a temperature above 50 degrees will require additional light to prevent premature formation of buds. Use 60 watt bulbs spaced 4 feet apart and 30 inches above the plants.

WHITE STANDARDS

VARIETY	DESCRIPTION	Matures	Pinch date Normal	per 100 Price
8 Week Varieties				
SILVER SHEEN , Intermediate incurved		Oct. 20	July 10	6.50

PINK POMPONS, SINGLES & ANEMONES (Cont.)

VARIETY	DESCRIPTION	Matures	Normal Pinch date	Price per 100
10 Week Varieties				
PARISENNE , Intermediate single, nearest to true pink. A favorite for all off season programs		Nov. 5	July 25	10.00
PORTRAIT , Large decorative pompon, deep lavender. Responds well to all season, pot work and disbudding		Nov. 8	July 25	7.00
DK. PK. BULKELEY , Intermediate formal pompon, dark pink. Good under shade		Nov. 8	July 25	7.00
COVER GIRL , Intermediate anemone, light lavender. Compact growth, good production		Nov. 10	July 25	9.00
PANDORA , Large decorative pompon, luminous-pink. Suited for the cloth house		Nov. 10	July 25	7.00
THYRA , Large pompon, deep lavender. Short grower, usable for pot work		Nov. 10	July 25	7.00
DK. LINDA LOU , Small anemone, Responds to year around production.		Nov. 10	July 25	7.00
MASTERPIECE , Large pompon, deep lavender. Suitable for pot work		Nov. 12	July 25	6.50
11 Week Varieties				
TAFFETA , Two-tone pink decorative. Good on year around programs		Nov. 15	July 25	6.50
DARK NORMA , Large anemone, dark lavender, yellow cushion		Nov. 15	July 25	7.00
PK. L. I. BEAUTY , Large anemone, lavender, yellow cushion		Nov. 20	July 28	7.00
DK. PK. L. I. BEAUTY , Large anemone, deep lavender, yellow cushion		Nov. 20	July 28	7.50
GRAND SLAM , Large single, silvery pink. Good variety for normal flowering		Nov. 20	July 28	7.00
MINUET , Intermediate pompon, rose-pink. Good quality flower		Nov. 23	July 28	6.50
ILLINI FORMAL , Intermediate rose pink pompon. Novel variety for Thanksgiving		Nov. 23	July 28	8.00
PINKY , Intermediate decorative pink pompon		Nov. 23	July 28	7.50
12 Week Varieties				
BEAUTIFUL LADY , Large anemone, deep lavender. Attractive variety, suitable for pots		Nov. 25	Aug. 1	6.50
VALENCIA , Large single, rose-pink		Nov. 28	Aug. 1	7.00
DK. PINK VALENCIA , Large single, orchid-pink		Nov. 28	Aug. 1	6.50
13 Week Varieties				
SALMON VALENCIA , Attractive addition to the Valencias		Nov. 28	Aug. 1	7.00
DUBONNET VALENCIA , Beautiful deep shade as name implies		Nov. 28	Aug. 1	8.00
ENCHANTRESS , Large anemone, deep lavender with yellow cushion		Dec. 5	Aug. 5	7.00
DK. PK. ENCHANTRESS , Large anemone, deep pink with yellow cushion		Dec. 5	Aug. 5	7.00
DEBUTANTE , Large single, lavender. Good for mid winter flowering. Withstands lower temperatures		Dec. 10	Aug. 10	6.50
ARGYLE , Small hard pink pompon. Outstanding late variety, pleasing color		Dec. 10	Aug. 10	9.00
MINSTREL , Intermediate pompon, lavender. Quality pompon for November and December		Dec. 13	Aug. 15	6.50
LT. PK. MINSTREL , Intermediate pompon, light lavender		Dec. 13	Aug. 15	7.50
14 Week Varieties				
RIVIERA , Intermediate decorative, lavender-rose		Dec. 15	Aug. 15	6.50
ROSALIND , Intermediate single, lavender		Dec. 20	Aug. 15	7.00
DEFIANCE , Intermediate decorative, lavender		Dec. 20	Aug. 15	7.00
LYNDA McLANE , Intermediate pompon, pink. Easy producer. A good addition to the late varieties		Dec. 25	Aug. 15	10.00

YEAR AROUND FLOWERING OF CHRYSANTHEMUMS

YEAR AROUND FLOWERING

By using artificial light or shading with black cloth, Chrysanthemums can be flowered at any time of the year.

If you wish to flower 'MUMS at any time other than their normal flowering season, select your flowering date or dates and order your stock early to be sure you have them to plant at the proper time. Then be prepared to light or shade them as your program requires.

LIGHTING

Lights are needed to prevent formation of buds before required growth is attained. A light intensity of not less than 10 foot candles is necessary to accomplish this, or approximately $1\frac{1}{2}$ watts of light per square foot of space, including walks. For small installations 60 watt lights, under reflectors, spaced 4 feet apart; or 100 watt lights, under reflectors, spaced 6 feet apart and about 30 inches above the tops of the plants will usually prove satisfactory. **AT NO TIME SHOULD THERE BE MORE THAN $8\frac{1}{2}$ HOURS OF DARKNESS.** Consequently lights should be applied preferably after 10 P.M., or as near midnight as possible, and lighted for the required number of hours as shown in the schedule.

Temperature — To flower under lights during the winter months it is necessary to keep a minimum temperature of 60 to 65 degrees, and not less than 60 degrees at night, during the period of growth and bud formation. After color shows in the buds, lower temperature gradually to 52-55 degrees to harden off the finished flowers.

ADDITIONAL LIGHTING SCHEDULE

- 2 Hours during the months of August, April, May.
- 3 Hours during the months of September, October, March.
- 4 Hours during the months of November and February
- 5 Hours during the months of December and January

Lighting Plants on a small scale.

When a small block or any part of a house is to be grown under lights be sure to drop a black cloth to cut off any other plants around them so their growth will not be effected by the lights. In other words the plants to be grown under lights must be isolated from any other plants around them during the hours of lighting.

SHADING

On programs calling for shading with Black Cloth, the plants should be covered daily at 5 P.M., and the cloth removed at 8 A.M. Continue the shading until buds are well developed and showing color. It is essential in shading that the benches be completely covered as any leaks of light will result in delayed flowering where light leaks retard progress of the buds.

DISTANCE TO PLANT. To produce quality blooms for either a pinched or no pinch crop, spacing as shown in schedule below is recommended.

SPACING FOR NO PINCH CROP

Crop Flowering	Pompon	Standards & Disbuds
May — Sept.	4 x 6	6 x 5
Sept. — Nov.	4 x 7	6 x 6
Nov. — Mar.	4 x 6	6 x 7
Mar. — May	4 x 7	6 x 7

SPACING FOR SINGLE PINCH CROP

Crop Flowering	Pompon	Standards & Disbuds
May — Sept.	8 x 6	8 x 7
Sept. — Nov.	8 x 7	8 x 8
Nov. — Mar.	8 x 8	8 x 9
Mar. — May	8 x 7	8 x 8

POT PLANTS FOR OFF SEASON FLOWERING

Under the Hardy or Garden Section is given the procedure for the Hardy Varieties for Easter, Mother's Day and Memorial Day Pot Plants. This we believe will cover the needs of most florists in this line. Should you desire information and data on Pot plant procedure for other seasons we will gladly furnish same on request.

LIGHTING AND SHADING PROGRAM FOR CHRYSANTHEMUMS

GARDEN VARIETIES FOR SPRING BLOOMING POT PLANTS

These plants have sales appeal as they can be sheared back after blooming and will flower again in the early fall.

Plants should be ordered to arrive 1 to 2 weeks ahead of first pinch date. For delayed start they may be planted and pinched on pinch date.

Pot and place under artificial lights upon arrival. Use 60 watt bulbs spaced 4 ft. apart and 30 inches above the plants.

Maintain a 60 degree night temperature until buds are well developed.

TWO PINCH METHOD

USE 4 PLANTS PER 6 INCH POT

FOR EASTER — April 10th

Plant Jan. 3 — 10th
First Pinch — Jan. 17th
Second Pinch — Feb. 14th
Discontinue Lights — Feb. 14th.

FOR MOTHER'S DAY — May 8th

Plant Feb. 1 — 7th.
First Pinch — Feb. 14th
Second Pinch — March 14th
Discontinue Lights and apply Black Cloth — Mar. 14th.

FOR MEMORIAL DAY — May 30th

Plant March 1 — 5th.
First Pinch — March 11th
Second Pinch — April 5th
Discontinue Lights and apply Black Cloth — April 5th.

SINGLE PINCH METHOD

USE 4 PLANTS PER 6 INCH POT

FOR EASTER — April 10th

Plant — Feb. 1st
Pinch — Feb. 14th
Discontinue Lights and apply black cloth — Feb. 14th

FOR MOTHER'S DAY — May 8th

Plant — March 1st
Pinch — March 14th
Discontinue Lights and apply black cloth — March 14th

FOR MEMORIAL DAY — May 30th

Plant — March 21st
Pinch — April 5th
Discontinue Lights and apply black cloth — April 5th
